"Doubao, help me change the background color of this photo."
"Change it again."
"Again."
AI-powered productivity tool: Doubao
User interaction: Iterative AI image regeneration for background color adjustment
Behavioral attributes: Repeated, iterative, and excessive use
The user repeatedly calls Doubao's AI to adjust the image background color (5–10 times, ~10s per generation) to get a satisfying result, representing disproportionate AI usage beyond basic task needs.

The trivial act of repeatedly adjusting image backgrounds via Doubao, through infrastructure links, accumulates into planetary environmental impacts (carbon emissions, resource depletion, e-waste) across energy, water, material, and regional dimensions, embodying the "planetary grounding" logic of AI interactions.
