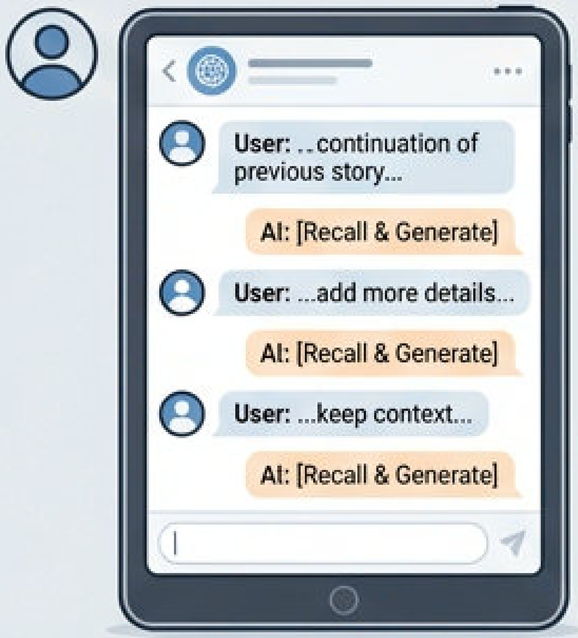
User invisible

1. USER BEHAVIOR
(Visible & Frictionless)

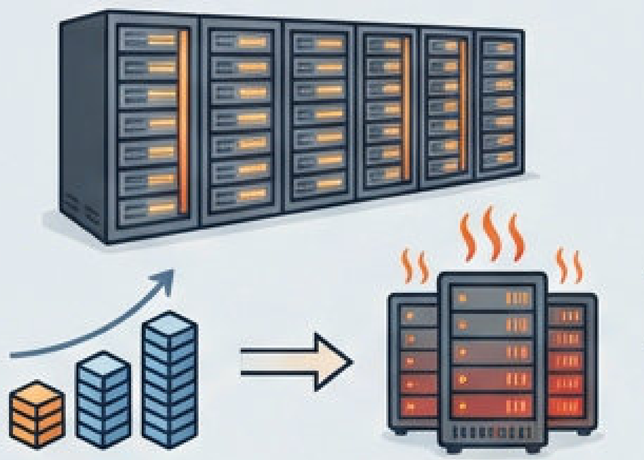


What: Single, long interaction with accumulated context.
Why Common: To maintain continuity (roleplay, coding).
Feels: Seamless, zero friction UI.

Result output

Activates

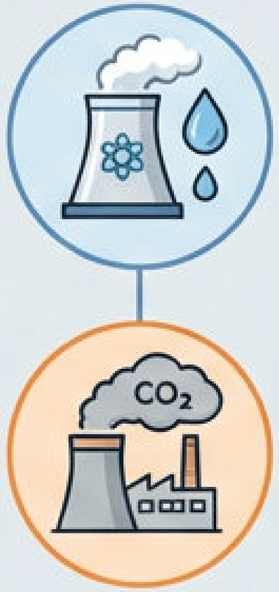
2. INFRASTRUCTURAL PROCESS
(Invisible & Escalating)



Temporal Scale: Session-based, Accumulative.
Dynamic: Exponential growth in computation per turn to re-process history.
Trigger: Every new prompt adds to the load.

Triggers

3. PLANETARY CONSEQUENCE
(Invisible & Environmental)



Water Consumption (Direct)

Energy Spikes & Carbon Footprint (Indirect)

Impact: Increased water evaporation for cooling & higher electricity demand from grid.
Result: Real-world resource depletion and emissions.

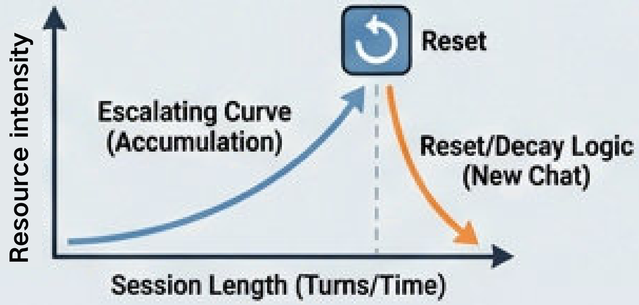
PATTERN MODELING & FUTURE DESIGN



Why Design Material?
Eco-conscious UI could visualize 'memory weight' or suggest resets.
